

Modern Grammar of German

ROSTISLAV STANĚK

Supervisor:

Ing. JOSEF STEINBERGER, Ph.D.*

The teaching utility for German grammar is a complex application which provides interactive learning of foreign languages. The utility is divided into three parts: Data layers containing data, Administration application allowing to enter data in the database and User application enabling final data display and target user usage. The tool can be used either for exercising the grammar by students themselves or through the use of interactive board. The main focus during the development of the tool was put on the universality of use, especially adaptability for another languages.
